SUMMARY

I am a **PhD Candidate** bridging microbial pathogenesis with Artificial Intelligence. My research involves applying **Deep Learning** and **Large Language Models** for Drug Discovery to combat **Priority Pathogens**. My current project is a data-driven workflow to repurpose drugs against multidrug-resistant pathogens, aiming to create a faster, more efficient pipeline for discovering therapeutics against high-priority pathogens.

Apart from that, I'm also an **ASM FLMF Fellow**, and I work as an **NEP Saarthi Ambassador** appointed by UGC, conduct workshops and events, and promote key policies and initiatives of the University Grants Commission (UGC) and the Ministry of Education (Govt. of India) throughout the University.

RESEARCH TOOLS & PLATFORMS

- **GrantSetu – Founder & Developer (grantsetu.in)** **May, 2026 – Present**
Independently developed a web platform aggregating Indian research–funding calls (fellowships, grants, schemes) into a single searchable interface, addressing the fragmentation of funding information across DBT, ICMR, SERB, and other agencies. Grew organic reach to 1,500+ users and 2,000+ sessions without paid promotion. Built end-to-end: data curation, web deployment, and SEO/discoverability strategy.
- **PhytoSynergyDB – Author & Lead Curator** **January, 2026 – Present**
Designed and built a curated relational database of phytochemical–antibiotic synergy interactions against ESKAPE and other priority pathogens, using a standardized schema (4-tier FICI classification, recalculated indices). Curated 1200+ verified entries through systematic literature screening.
